EXAMPLE MANUFACTURING GMBH (SAMPLE)

Article 14 evidence pack — sample

Generated 2026-09-15T10:06:00.000Z · Verification code SAMPLE-PACK

Case

Case	CVE-2021-44228 in Example Endpoint Agent
Type	Actively exploited vulnerability
Product	Example Endpoint Agent 4.1.8, 4.2.1
Reported to	BSI / CERT-Bund (Germany)
State	final_submitted
Note	Illustrative. Not a customer, and not a filing that was made.

Timeline

Became aware Art. 14(2)	2026-09-02T09:15:00.000Z

Final report due Art. 14(2)(c)	2026-09-22T14:00:00.000Z
Final report submitted Art. 14(2)(c)	2026-09-15T10:05:00.000Z

Assessment

The Article 14 duty is triggered by exploitation of the manufacturer's own product. These questions were answered before this case was opened.

Is the vulnerable component actually used in the shipped product?
Yes

Is the vulnerable code path reachable?
Yes

Is there evidence of exploitation affecting this product?
Yes

Is the product still within its support period?
Yes

Rationale recorded at the time

The agent formats untrusted collector input through the affected logging library, so the vulnerable path is reachable in both supported versions. Listed in the CISA exploited catalogue, which is the trigger to assess; the reachability above is what made it reportable.

Submissions

Early warning

Submitted	2026-09-02T16:40:00.000Z
Platform reference	SRP-2026-004417
Filed by other means	Submitted through the ENISA platform by the authorised representative.

Notification

Title Art. 14(2)(a)	Active exploitation affecting Example Endpoint Agent 4.x
Date and time you became aware Art. 14(2)(a)	2026-09-02 09:15 UTC

Product

Product name Art. 14(2)(b)	Example Endpoint Agent
Product version or version range Art. 14(2)(b)	4.1.8, 4.2.1
Member states where the product is available Art. 14(2)(a)	DE, AT, NL

Notification

Submitted	2026-09-04T11:20:00.000Z
Platform reference	SRP-2026-004417

Nature of the vulnerability or incident

CVE identifier Art. 14(2)(b)	CVE-2021-44228
Component name Art. 14(2)(b)	org.apache.logging.log4j/log4j-core
General information about the vulnerability or incident Art. 14(2)(b)	Remote code execution through JNDI lookup in the logging library, reachable from untrusted collector input in the affected versions.

Corrective and mitigating measures

Corrective or mitigating measures taken Art. 14(2)(b)	Lookups disabled by configuration in a hotfix released to all supported versions.

Final report

Submitted	2026-09-15T10:05:00.000Z
Platform reference	SRP-2026-004417

Detailed description

Full description of the severity Art. 14(2)(c)	CVSS 10.0. Unauthenticated remote code execution.
Full description of the impact Art. 14(2)(c)	Two supported versions affected; no evidence of exploitation against users of this product.

Corrective and mitigating measures

Details of the security update or corrective measure available Art. 14(2)(c)	Versions 4.1.9 and 4.2.2 upgrade the library and remove the lookup path.
Date and time a corrective or mitigating measure became available Art. 14(2)(c)	2026-09-08 14:00 UTC

Integrity

Every recorded action is hash-chained to the one before it. Recomputing the chain detects any entry that was altered or removed.

Entries	31
First hash	4f1c0a9e77b2d3
Last hash	b8e5d2170c9a64
Chain verified	Yes, intact
Verification code	SAMPLE-PACK

Sample pack published by Declara to show what one contains. This produces evidence, timelines and drafts. It is not legal advice, and the manufacturer remains the party responsible for reporting.
